

# Simple Comparison

We all know that we have finite resources. Margins are low. Expenses are high. Affordable expertise is hard to find.

Your business resources are a precious commodity so why waste it working harder instead of smarter?

Did you know that the Continuum GRC ITAM platform was created to solve these problems by a company with the same problems when a solution was not available? We knew back then that the old traditional and manual methods still in use today were inefficient, expensive, and far from easy-to-use. We created the only assessment solution so we could work smarter and not harder.

**Now, with Continuum GRC, so can you!**

## ITAM -vs- Traditional Methods

### 1 Time is Money

The average time to complete the NIST 800-53 FedRAMP System Security Plan (SSP) and associated attachments manually is **480 hours**.

The average time to complete these same tasks using the Continuum GRC ITAM SaaS solution is **65 hours**.

Save  
638%

### 2 Reduction of Labor

The typical hourly wage for an employee technologist with FedRAMP audit and assessment skills is \$75. The cost in wages for 480 hours is **\$36,000**.

The typical cost to use the Continuum GRC ITAM SaaS solution and the same employee is only **\$27,327**.

Save  
32%

### 3 Safe and Secure

Continuum GRC ITAM SaaS solution is securely hosted in the **FedRAMP certified GovCloud**. Your confidential data is encrypted, isolated, and requires multi-factor authentication that only you manage. **ITAM is SOC 2, HIPAA, and GDPR audited and PCI certified.**

Can you say the same about those traditional spreadsheets, templates, email, file shares, and mountains of FedRAMP data?

Security  
is #1

### 4 Sustainable Automation

When you create the system security plan for FedRAMP, it takes about **4,800 minutes** after you've collected everything.

Continuum GRC ITAM SaaS solution completes the same task using our powerful patent pending automation in **only 1 minute**.

Save  
4,800%
